Bigcommerce - Imonggo Integration

User Guide

CONTENTS

BIN FAÇADE

BIN OVERVIEW

A requisite for an e-commerce website is a well-structured Point-of-Sale system that has optimal performance even when outstretched by numerous store transactions. Hence, Imonggo is of advantage. Its flexibility can be attested through its several minute functions, may it be decreasing inventory levels or creating new products.

Bigcommerce, on the other hand, is an e-commerce website that can cater various store types. It has a user-friendly interface that can come handy with rising entrepreneurs and even with those who are matured in the field.

Merging both (Bigcommerce and Imonggo) results in a platform named Bigcommerce-Imonggo Integration (BIN). It was made to connect these websites in terms of the following functionalities:

- Product transfer, updates, deletion
- Customer transfer, updates
- Invoice transfer
